

## EXCELLENT PERSPECTIVES IN MEDICAL EDUCATION

PENTAX Campus is a well established education programme with highly qualified speakers and instructors for people who want to know more and do more. PENTAX promotes a selection of high-quality education courses at a national and international level in cooperation with hospitals, associations, companies and the health care industry. Individual courses focus on well-founded theoretical and practical knowledge for successful implementation of routine endoscopic and medical procedures.

In conjunction with the theoretical part of the education programme, the clinical component takes into account the specialist area, the needs of the participant, the clinical facility and not least, the patients.

Each of our three Medical Education Centers concentrates on a certain area of application. In our education courses under the direction of qualified specialists at three different places of interest in Europe, you will receive the exclusive opportunity to get to know and understand innovative technologies and observe established methods from a completely new perspective. PENTAX offers you this exclusive access – prepare yourself for the next generation of innovative medicine.
